

TOX-BIND

Analytical constituents:

93.86 %	Crude ash	1.22 %	Potassium
1.79 %	Calcium	1.02 %	Magnesium
1.23 %	Sodium	0.04 %	Phosphorus

Composition:

Sea weed meal, Thistle seed (expeller)

Additives:

Mycotoxin reducers Aflatoxin B1: 1m588 Bentonite

Sensory additives:

Mixture of flavouring compounds

Anticaking agent/binders:

Clinoptilolite (1g568)

Bentoniet-montmorillonite (1m558i)

Description:

DufaMix Tox-Bind is composed of carefully selected clay minerals, binding agents and a unique blend of phytogenics to powerfully combat mycotoxins and to protect animals for the negative effects of mycotoxins. DufaMix Tox-Bind is stable over a wide pH range and is not affected by processing. This is essential to possess the ability to tightly bind and tackle a wide range of mycotoxins but also endotoxins in the gastrointestinal tract with negligible effects on micronutrient uptake.

Directions for use:

DufaMix Tox-Bind is a premixture suitable for incorporation in feed for all species and categories of animals. The advised rate of inclusion is 1 - 2.5 kg of DufaMix Tox-Bind per tonne in the final feed. This inclusion rate may be adjusted in order to account for seasonal variations in raw feed materials and toxin levels.

Storage conditions:

Store dry, dark and below 25°C. Do not freeze.

Packing:

25 kg sacks.
